

IN

ANNUAL TRAFFIC REPORT

1974

Washington State Highway Commission
Department of Highways
IN COOPERATION WITH THE
U.S. Department of Transportation
Federal Highway Administration

INTRODUCTION

The Washington State Department of Highways is responsible for the administration of approximately 6,900 miles of roads that involve large expenditures annually for planning, design, construction and maintenance. This necessitates having reliable and current traffic volume data, vehicle type classification and travel statistics throughout the State. Such records are essential to accurate estimates of present and future highway use, needs and cost.

Scheduled vehicular traffic counts have been obtained at selected locations on the State Highway System for many years. The majority of the volumes shown in this report are computed from short term counts and their degree of accuracy is acceptable for showing yearly trends. Traffic data to be used for design purposes should be obtained by specific requests.

The report contains Average Daily Traffic volumes (ADTs) for the years 1971 through 1974. Percentages of commercial vehicles are shown at all locations listed in this report and separated into two types, single units and combinations. Single units consist of two and three axle trucks and busses (excluding pickups). Combinations include all trucks with trailers, or semi-trailers.

Included in the forward section of this report are summaries of historical traffic data at permanent traffic recorder locations, toll ferries and bridges for 1960 through 1974. Also, included on the front inside cover of this report is a copy of the 1974 Washington State Traffic Flow Map.

There are some state routes that involve one-way couplets. Because couplets are difficult to describe, the routes are also shown in sketch form in the back of the report. The areas involved are as follows: Aberdeen, Centralia, Port Angeles and Puyallup.

Also shown in the report at each location is the functional class of the highway.

- | | | |
|--------------|--------------|---------------|
| 1. Principal | 3. Collector | 5. Interstate |
| 2. Major | 4. Other | |

Total vehicle miles of travel on all State Highways decreased 3.5 percent from 1973 to 1974.

Inquiries relating to traffic should be directed to the Planning Survey Division. (753-6086 or 753-6234).

COLLECTION AND PROCESSING OF DATA

A traffic count is the number of vehicles that passes a given point during a specified period of time. These vehicles may be recorded by either manual tally or a mechanical counting apparatus. In this report the volumes shown represent an estimate of the average day of the year. (Average Daily Traffic Volume).

There are 45 locations throughout the State that are counted continuously throughout the year. The data collected at these locations provide traffic variation patterns.

The patterns consist of monthly factors which represent seasonal variations of vehicular movement. The application of these factors to 48 and 72 hour counts averaged to a 24 hour volume, results in the modification of such counts to an estimate of the annual average daily traffic volume (ADT). Weekdays, rather than weekends, are used because the traffic does not fluctuate as erratically during weekdays as it frequently does during weekends.

The percentage of trucks in the traffic stream is of major importance for design purposes. Since mechanical counters do not distinguish between the different types of vehicles, manual counts are conducted to obtain percentages by vehicle type. The truck and bus percentage has been computed as an average for a section of roadway and may not be representative of a specific location.

H. R. GOFF
Assistant Director for Planning,
Research and State Aid
