

An outline map of Washington state is positioned on the left side of the cover. The map is drawn with a simple black line and includes a small star in the southwestern corner, representing the location of Olympia. The map's right edge is integrated into the large rectangular frame that encloses the title and publisher information.

1968 WASHINGTON STATE TRAFFIC FLOW MAP	(<i>In Pocket at End of Report</i>)

INTRODUCTION

The need for reliable and current traffic volumes and vehicle type classification throughout the state has been growing in importance. An accelerated program of highway planning and construction coupled with the administration and maintenance of an overburdened existing highway system demands an increasing amount of this type of information. Public and private agencies alike have become more traffic volume conscious. It is through this Annual Traffic Report that much of the required data is made available.

The 1968 Annual Traffic Report contains listings of the average daily traffic volumes for the years 1955 through 1968 at all rural and urban stations counted during the years. Percentages of commercial vehicles for 1968 are shown at all stations manually counted during the year. Included in the report are summaries of historical traffic data at permanent traffic recorders, toll ferries, and bridges, with the addition of data for selected years since 1955. Also included is the 1968 Washington State Traffic Flow map.

The procedure of rounding off traffic volumes was first used in the 1955 report and has been continued since that time with the exception of stations where exact traffic volumes are computed from daily records covering the full year. The procedure for rounding off the traffic volumes is as follows:

VOLUME GROUP		ROUNDED TO NEAREST	EXAMPLE
UNDER	1,500	10	832 = 830 838 = 840
	1,500 - 5,000	50	1,564 = 1,550 1,576 = 1,600
OVER	5,000	100	7,755 = 7,800 30,240 = 30,200

The highway routes are shown in sequence by sign route number with the route shown from its point of beginning as designated by legislative act (*Federal-aid procedures in the case of the Interstate highways*). Accrued route mileage from the route's point of beginning to the count location is also shown together with the Federal-aid route number and the state highway control section number for additional identification purposes.

Also shown at each location is the functional class of the highway or section of highway as follows:

- | | | |
|--------------|--------------|---------------|
| 1. Principal | 3. Collector | 5. Interstate |
| 2. Major | 4. Other | |

Several State Highway System additions and deletions took place in 1968. They are footnoted in the report where clarification was thought advisable.

Total traffic on all State Highways increased 6.6% from 1967 to 1968.
