

An outline map of Washington state is positioned on the left side of the cover. The map is drawn with a black line and includes a shaded area representing the Puget Sound region. The entire cover has a yellow, textured background.

ANNUAL TRAFFIC REPORT

1973

**Washington State Highway Commission
Department of Highways
IN COOPERATION WITH THE
U.S. Department of Transportation
Federal Highway Administration**

INTRODUCTION

The administration of approximately 6,900 miles of roads on the State Highway System involves the expenditure of millions of dollars annually for design, construction and maintenance. This requires the need for reliable and current traffic volume data, vehicle type classification and travel statistics throughout the state. Such a record is essential to proper estimation of present and future highway use, needs and cost. It is of importance not only to the Highway Department, whose primary concern is highways, but to various Federal, State and local agencies, business organizations, research groups and individual citizens.

The location and design of new highways, with their interchanges and bridges, are contingent upon present traffic volumes and also of future volumes forecast on the basis of past and present day traffic data. Without this basic information, it would be impossible to build roads economically and yet with the capacity adequate for future needs and designed for maximum safety.

Numerous other functions of the Highway Department are also served by traffic data. For example, average daily traffic volume is one of the items taken into consideration in the setting of speed limits, channelization, signalization and vehicle miles.

Special studies are often required as a guide for legislation on highways. These cover the highways use, needs and cost for which traffic data is essential.

The 1973 Annual Traffic Report contains comparative average daily traffic volumes for the years 1970 through 1973. Percentages of commercial vehicles are shown at all locations listed in the report and separated into two types, single-units and combinations. Single units consist of two and three axle trucks and busses, combinations included all multiple axle truck combinations and cars or pick-ups pulling trailers. Included in the forward section of the report are summaries of historical traffic data at permanent traffic recorders, toll ferries and bridges for 1960 through 1973. Also, included on the front inside cover of the report is a copy of the 1973 Washington State Traffic Flow Map.

There are some state route alignments where one-way couplets occur. Because these are difficult to show in printed form, we have deleted them from the listed section and they are shown in sketch form in the back of the report. The areas are as follows: Aberdeen, Centralia, Port Angeles and Puyallup.

Total traffic on all State Highways increased 5.3% from 1972 to 1973. Based on vehicle miles.

Inquiries relating to traffic should be directed to the Planning Survey Division, Traffic Section - 753-6086.

H. R. GOFF

Assistant Director for Planning, Research
and State Aid
